Department of Information Technology

Subject Name: Project Phase II*	Semester: Even
Subject Code: BTITP803	Class: B. TECH-IT
Project Abstract	
Problem Statement ID	25250
Problem Statement Title	Government offices often suffer from low levels of productivity at the organizational, team and individual levels, but there are no online tools to set goals/ objectives, define and benchmark success parameters, track progress and calculate productivity levels at the aforesaid 3 levels. To address this management gap and improve productivity and employee engagement in government offices a suitable online tool/ module should be developed under the e-Office platform.
Description	Government organizations often face challenges in measuring and improving productivity due to the lack of structured digital tools for performance monitoring. In institutions such as the Brahmaputra Board, employees perform diverse roles, including administrative work at headquarters and technical project-based tasks in field units. The existing Annual Performance Appraisal Report (APAR) system is largely subjective and does not provide continuous or data-driven evaluation of employee performance. Vision To develop a transparent, scientific, and data-driven performance management module under the e-Office platform that captures and quantifies productivity at the individual, team, and organizational levels, both at headquarters and in field units. The vision is to move beyond perception-based appraisals and introduce an objective, continuous, and automated mechanism that generates real-time performance insights through dashboards, thereby enabling better decision-making, improved employee engagement, and enhanced organizational outcomes. Objectives 1. Define Role-Specific KPIs – Standardize measurable parameters for different categories of staff: • Headquarters staff (file disposal rate, turnaround time, quality of drafting, responsiveness, digital adoption). • Field units (timeliness and quality of DPR preparation, survey accuracy, adherence to project timelines, expenditure vs. financial targets, physical progress of works, compliance with technical standards). 2. Develop a Weighted Scoring Model – Quantify employee performance on a scale of 100, with separate weightages for measurable outputs (e.g., timeliness, accuracy, progress achieved) and qualitative aspects (initiative, teamwork, innovation). 3. Enable Real-Time Monitoring – Integrate dashboards at HQ, Division, and Project levels to track ongoing tasks, project milestones, and employee productivity continuously. 4. Strengthen Accountability – Reduce subjectivity in performance assessment by introducing a hybrid model where quantitative metrics are generated automatically and qualitative feedback is given limited weightage. 5. Improve Employee Engagement – Allow employees to view their progress against defined goals, motivating them to take ownership of outcomes.

	6. Enable Data-Driven Appraisals – Link quantified performance scores to promotions, training needs, and recognition. What We Aim to Achieve The proposed system aims to transform performance measurement in the Brahmaputra Board by covering both administrative and project-related functions. Through this productivity measurement module, - Objectively quantify performance of both HQ staff and field engineers through scientific KPIs. - Track project execution efficiency by measuring DPR preparation timelines, project progress, budget utilization, and quality compliance. - Identify high performers and underperformers for targeted capacity building, mentoring, or corrective actions. - Enhance transparency and fairness in performance evaluation, ensuring recognition of genuine contributions across both office and field functions. - Support evidence-based decision making in promotions, workforce deployment, and resource allocation. - Create a culture of accountability and ownership where employees know that their contributions — whether in file movement or project execution — are continuously tracked and acknowledged.	
	Organization	Ministry of Jal Shakti (MoJS)
